

## Site Design & Implementation

Whether it is your physical site in the real world, or your website presence in the cyber world, M9 Systems can design, implement, and support a solution tailored to your business needs.

**Physical Site Design** starts with preparation. Determining internet connectivity options and technical requirements, rack and other construction needs, data cabling and electrical requirements.

We can help you choose the appropriate connectivity solution based upon your geography, budget, and needs for **Bandwidth** and service level.

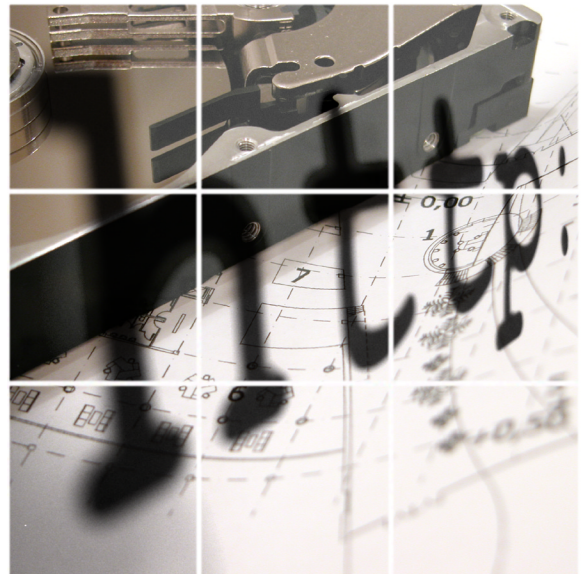

We can meet all your data cabling needs - providing a complete data cabling and rack design prior to installation, organized for the maximum in both reliability and manageability.

Need wireless? We can also design and implement a complete, integrated system of best-in-class hardware and software for wireless connectivity.

Servers, workstations, UPS, as well as all required network equipment can be part of the design. We can even procure and/or build the **Hardware**.

Couple this to our **Project Management** of product shipments from vendors and their installation to have M9 Systems become your total solution provider for end-to-end accountability.

At project completion, all equipment is commissioned and tested for proper operation using necessary procedures and test equipment. As-built **Documentation** is completed and issued to you in support of on-going **Site Management**.

The internet offers much more than simply an additional channel over which products can be sold or services delivered. It represents an opportunity to redefine the relationship and interaction between you, your partners, and your customers.

M9 Systems can work with you on **Website Design** to ensure

- Usability and navigation
- Design and layout
- Content and e-commerce strategies

are all maximized in pursuit of the business goals for your website.

- Promote your service, product or brand
- Reach new customers
- Provide customer support
- Conduct market research
- E-commerce
- Employee Portal

\* all with real, concrete, metrics

### Common Mistakes in Website design or redesign

1. Poorly defined objectives
2. Lack of ownership
3. Self-referential design

(ForresterResearch)

M9 Systems is also a full **Hosting** service provider.
